Belt Wear and the Accessory Belt Drive System (ABDS)

An important message on Belt Wear and its role in the ABDS!!

New belt vs. Worn belt illustration

Over time, belt ribs lose material, similar to a tire. With material loss, the space between the ribs increases which can cause the belt to “bottom out” on the pulley, resulting in:

- accelerated belt wear
- slip
- noise
- hydroplaning

Neoprene belts exhibit cracks as they age. Ethylene Propylene Diene Monomer (EPDM), belts do **NOT** show cracks as quickly and have a life expectancy of 50-60K miles. Until all belt manufacturers supply EPDM belts, you will continue to see cracks as a sign of wear on belts!

Industrial Belts

Super HC® and Super HC® Molded Notch V-Belts

Recommended for use on special drives where space and weight limitations are critical. These “narrow” cross-sections can transmit up to three times the horsepower of the classical cross-sections (A, B, C and D) in the same amount of drive space. Suitable for all industrial applications, particularly where space, weight and horsepower capacity are critical.

- Gates curves provide proper cord support and full contact with the sheave-groove for uniform loading, uniform wear and increased belt life.
- Flex-bonded cords are strongly bonded to the body of the belt resulting in equal load distribution and the absorption of bending stress without cord deterioration.
- The Flex-Weave® cover is a patented construction for longer cover life, providing extended protection to the core of the belt from oil, dirt, and heat.
- Meets or exceeds RMA standards for static conductivity and heat and oil resistance.

Industrial Micro-V® Belts (J, L and M Series)

Exclusive truncated [shortened] profile gives Micro-V® belts increased flexibility, reduced heat buildup and allows performance at higher speeds on smaller diameter sheaves. Well suited for applications such as appliances, outdoor power equipment, roller conveyors, machine tools, medical equipment and exercise equipment.

- Fiber reinforced ribs for excellent wear resistance.
- High modulus, low stretch tensile member for added strength and dependability.
- Smooth running for minimal vibration at high speeds.
- Meets or exceeds RMA standards for static conductivity and heat and oil resistance.

Super HC® and Super HC® Molded Notch PowerBand® V-Belts

The PowerBand® construction allows multiple belts to function as a single unit, with even load distribution and each strand fitting securely in the sheave groove. Recommended for multiple V-belt drives exposed to pulsating or heavy shock loads which can make belts whip, turn over or jump off the drive.

- The tie band assures high lateral rigidity, guiding the belt in a straight line and preventing it from coming off the drive.
- Concave sidewalls provide proper cord support and full contact with the sheave-groove for equal loading and uniform wear.
- Flex-bonded cords are strongly bonded to the body of the belt resulting in equal load distribution and the absorption of bending stress without cord deterioration.
- Meets or exceeds RMA standards for static conductivity and heat and oil resistance.

Hose + Systems Coolant

Hose Shelf Life

Storage environment, along with rubber materials, can vary the shelf life limit. Shelf life is difficult to quantify as many variables affect the hose. Proper storage precautions can result in three to five years of shelf life. Beyond this time, there can be a significant service life decrease, depending on storage environment variables.

Some variables include:

Hose should be stored in a cool, dry area never exceeding +100°F [+38°C]. If stored below freezing, pre-warming may be required prior to handling, testing and placing into service. Store hose in original container. Never stack hose too high, as its weight can crush hose at the bottom of the stack. Gates recommends hose in extended storage be visually inspected and tested prior to use. Hose judged marginal should be replaced to avoid potential failure, property damage or bodily injury. Store hose on a first-in/first-out basis. Unusually long storage, or poor storage environment can deteriorate hose, reduce performance and may lead to premature failure.

Molded Coolant Hose

Gates molded coolant hose is manufactured to fit specific applications. Similar to OEM specifications. Approved for marine applications.

- Recommend for upper, lower, by-pass, heater and other coolant hose applications.
- Heat and ozone resistant cover.
- Engineered to resist electrochemical degradation - the leading cause of hose failure.
- Re-engineered materials resist vacuum collapse, this reduces the need for internal springs in many applications.

Hose

Diesel Emission Fluid (DEF) Hose Assemblies

Diesel Emission Fluid (DEF) Hose Assemblies are specially designed and manufactured to convey Diesel Emission Fluid (DEF). Because DEF freezes at +11°F [-12°C], the hose and couplings are electronically heated using Gates revolutionary carbon fiber heating system. This patent pending technology allows for more uniform fluid heating compared to heated-wire designs. Customizable hose lengths offer greater flexibility in design while thermoplastic over-molds protect electrical connections against moisture and corrosion.

Brake Line Abrasion Shields

The Federal Motor Carrier Safety Administration's recently launched Compliance Safety Accountability (CSA) program requires abrasion shields on brake lines that fall below the chassis and in circumstances where chafing, kinking or other mechanical damage can occur. Gates provides high-quality products that meet the rules and specifications for brake line protection.

PolySleeve High Density Polyethylene Hose Wrap

Protects lines and hoses from chafing, rubbing, crushing, ultraviolet rays and other hazards that cause hose failures. Easy to install before or after assemblies are in place. Effective temperature range from -40°F to +280°F.

Nylon Sleeves

Nylon filament mesh forms a self-renewing shield that protects against abrasion for brake lines, hose and hose bundles. Extremely flexible, flame resistant and easy to install.

Plastic Coil Sleeve

Economical, lightweight plastic sleeving protects lines and hoses from water, air, gasoline, hydraulic fluids and impacts. Easy to install before or after assemblies are in place. Effective temperature range from -40°F to +250°F.

* **Note:** Federal law requires registration with the Department of Transportation for anyone producing air brake hose assemblies with swaged or crimped fittings.

Hydraulics Accessories

Nylon Protective Sleeve

Gates Nylon Sleeves perform a dual role. They provide excellent abrasion resistance to protect individual hoses and they can be used to bundle several hose assemblies together for maximum protection. Downtime and maintenance costs are reduced. These Nylon Sleeves are unique because they form an extra protective layer against abrasive

forces. Specifically, thousands of tiny Nylon filaments, woven into the texturized yarn, “friz” into a self-renewing shield that is extremely resistant to severe abrasion.

This nylon sleeving has MSHA flame-resistance approval. Add $\frac{1}{8}$ " for installation.

Note: Do not use the Nylon Sleeve where ambient temperatures exceed 250°F.

Life Guard™ Line-of-Sight Sleeving

The LifeGuard™ Line-of-Sight Sleeving System is the first true protection in line-of-sight hydraulic applications.

It contains bursts up to 10,000 psi and pinhole leaks up to 5,000 psi at 250°F for up to five minutes. After redirecting the explosive force down the length of the hose, the LifeGuard sleeve disperses the energy and fluids at the hose ends via carefully designed “channel” clamps. The leaked fluid then allows for fast hose failure detection. The double-layer sleeve effectively shields against hazards.

Hose Guards

Gates offers a full line of hose guards for most every need.

- Plated Wire Spring Guards
- Plated Flat Armor Spring Guards
- Plastic Protective Coil Sleeves
- PolySleeve™ High Density Polyethylene Hose Wrap - Black
- HeatGuard® Protective Sheathing
- HeatGuard® High-Temp Protective Sheathing

Vinyl Bend Restrictor

Gates tapered PVC sleeve reduces bending stress in the hose near the coupling to prevent damage, such as in power wash applications. Installed during hose assembly, this smoothly-finished product withstands temperatures from -40°F to +200°F [-40°C to +93°C].

- Friction Fit.
- Smooth finish will not scratch finish on equipment being washed.
- Tapered design reduces bending stress.
- Wide temperature helps give extra long service life for both hot and cold power wash assemblies.

POWERCLEAN™ Flush Tool

Cooling systems can be difficult to flush completely due to accumulated debris. Inadequate flushing can ruin a newly installed water pump and result in warranty problems and frustrated customers. Make sure you perform a complete cooling system flush by using clean water and compressed air. The Power Clean Flush Tool "water hammers" accumulated sludge and scale deposits without the use of harsh chemicals or solvents. It cleans radiators, heat exchangers, hoses and engine blocks more effectively than conventional flushes, maintains system integrity and ensures warranty coverage on replacement parts, including water pumps. The Gates Power Clean Flush Tool patented process uses fixed dimensional control of the air and liquid flow paths. The process allows air to pressurize the cleaning fluid to scrub deep into corners and crevices, eliminating trapped debris.

- Pulsating gun assembly with pre-set regulator.
- Water line backflow preventer.
- Large rubber tip for radiator necks and direct flushing of the engine block.
- Small rubber tip on whip hose for direct access to heater core tube stubs.
- 5/8" And 3/4" heater hose barbs for flushing heater cores or engine blocks.
- Durable protective storage case with room for additional items.

SureLok™ Quick-Release Pliers

SureLok™ couplings [Push-to-Connect] are the easiest and quickest coupling to install, but can be difficult to disconnect. Placement near obstructions, as well as age and road debris, affect the ability to disconnect the SureLok™ coupling. Tight spaces can also make removing a coupling almost impossible. SureLok™ pliers allow for the removal of a Push-to-Connect coupling from the tubing in seconds with just one hand. To help get into tight spaces, SureLok pliers offer two different heads; one straight and one with a 90° offset. They come in two sizes: Small, for tubing from 1/8" to 3/8"; and Large, for tubing 3/8" to 3/4". An instructional CD is included with each part number.

Belt Wear Gauge

Like tires, EPDM belts wear out gradually, steadily losing rubber material. This unique tool designed to help inspect serpentine belts for wear. EPDM belts, installed by original equipment manufacturers on new equipment, typically do not show obvious signs of wear such as cracking. Contact your local Gates representative to receive your tool. PolarSeal® II Pliers

PolarSeal® II Pliers are used to crimp clamps on PolarSeal® II couplings. Any one of three pliers will get the job done. Each tool is designed with slightly different features.

Ratcheting Plier – Part No. 77953

- The ratcheting plier features a no-release function. Once a crimp is started the plier does not release until the crimp is complete. This guarantees a proper seal, with no guess work in the crimp.

Straight Jaw Plier – Part No. 77952

- The straight jaw plier is a low cost, no-frills plier. This plier works best when there are no obstructions to hinder gripping the clamp or completing the crimp.

Notched Jaw Plier – Part No. 77951

- The notched jaw plier is designed for the hard-to-reach places. If obstructions prohibit the use of straight jaw pliers this is the tool to use. Use either side or the front of this plier to make the crimp.

Coolant + Battery Refractometer

Measures concentration of coolant mixture in engine. Place small sample of coolant on lens, then hold lens up to light source. Light bends through liquid, providing an accurate reading on scale. Part No. 91001.

- Measuring coolant concentrations is essential to cooling system maintenance.
- Most technicians use hydrometers to test coolant concentration via gravity or floating ball scales.
- Hydrometers must be temperature corrected, and may give false readings when testing new, propylene-based coolants.
- Gates refractometer automatically corrects for temperature on both types of coolant (ethylene and propylene glycol) while measuring battery charge levels.

- Wrenches are 21½" long, 6" longer than competitive designs for increased leverage.
- Includes eight sizes for maximum application coverage: 13mm, 14mm, 15mm, 16mm, 17mm, ⅜", ½" and ¾."

How to Use

This catalog contains seven distinct Equipment Type specific Application sections. Each Application section is sorted alphabetically by Equipment Manufacturer, then further sorted based on a hierarchy pertinent to the Equipment Type. The 'Index by Equipment Type and Make' serves as a quick reference to aid in easily navigating the catalog. Also included in this catalog are Product Pages, a Model and Manufacturer Index, Size Lists (Including Straight Hose), and an Interchange that Relates FleetRunner® Belt Part Numbers to standard Micro-V AT® Belt and XL® V-Belt Part Numbers.

The Application Sections could contain the following:

1. Equipment Type Specific Hierarchy (Make, will also include a subset of Year, Model and Engine)
2. Our Part Number
3. Manufacturer Part Number (for Belts, Tensioners, and Pulleys)
4. Application Description and Comments
5. Footnotes
6. Footnote definitions for footnotes used on the page
7. Inside Diameter (and Length required if available) for Straight Hose*

Showing Belt Numbers with Corresponding Nominal Outside Lengths, Top Widths and Angles

IMPORTANT: Lengths shown (O.C. is Outside Circumference) are obtained by measuring around the outside of the belt. These lengths will not agree exactly with the size significant belt numbering system which is based on the effective length of the belt. Effective length ("engineered" length) cannot be measured in the field because special tools are required.

Automotive Top Widths are the standard sizes defined by the automotive belt industry (SAE J636). Due to manufacturing processes that create "Vertical Flats", the top width of XL and Truck/Bus series V-Belts will not agree with the printed top width dimensions. Top width on this page and on the belt sleeve refers to the pulley groove width and not the actual top width of these belts. A picture of a V-Belt with "Vertical Flats" is shown below. Actual top width of like belt sizes will also vary slightly depending on the manufacturer and belt style.

Showing Belt Numbers with Corresponding Nominal Outside Lengths, Top Widths per Strand and Angles

IMPORTANT: Lengths shown (O.C. is Outside Circumference) are obtained by measuring around the outside of the belt. These lengths will not agree exactly with the size significant belt numbering system which is based on the effective length of the belt. Effective length ("engineered" length) cannot be measured in the field because special tools are required.

Automotive Top Widths are the standard sizes defined by the automotive belt industry (SAE J636). Due to manufacturing processes that create "Vertical Flats", the top width of XL and Truck/Bus series V-Belts will not agree with the printed top width dimensions. Top width on this page and on the belt sleeve refers to the pulley groove width and not the actual top width of these belts. A picture of a V-Belt with "Vertical Flats" is shown below. Actual top width of like belt sizes will also vary slightly depending on the manufacturer and belt style.

Showing Belt Numbers with Corresponding Nominal Outside Lengths, Top Widths and Angles

IMPORTANT: Lengths shown (O.C. is Outside Circumference) are obtained by measuring around the outside of the belt. These lengths will not agree exactly with the size significant belt numbering system which is based on the effective length ("engineered" length) cannot be measured in the field because special tools are required.

Automotive Top Widths are the standard sizes defined by the automotive belt industry (SAE J636). Due to manufacturing processes that create "Vertical Flats", the top width of XL and Truck/Bus series V-Belts will not agree with the printed top width dimensions. Top width on this page and on the belt sleeve refers to the pulley groove width and not the actual top width of these belts. A picture of a V-Belt with "Vertical Flats" is shown below. Actual top width of like belt sizes will also vary slightly depending on the manufacturer and belt style.

Showing Belt Numbers with Corresponding Nominal Outside Lengths, Top Widths and Angles

IMPORTANT: Lengths shown (O.C. is Outside Circumference) are obtained by measuring around the outside of the belt. These lengths will not agree exactly with the size significant belt numbering system which is based on the effective length of the belt. Effective length ("engineered" length) cannot be measured in the field because special tools are required.

Automotive Top Widths are the standard sizes defined by the automotive belt industry (SAE J636). Due to manufacturing processes that create "Vertical Flats", the top width of XL and Truck/Bus series V-Belts will not agree with the printed top width dimensions. Top width on this page and on the belt sleeve refers to the pulley groove width and not the actual top width of these belts. A picture of a V-Belt with "Vertical Flats" is shown below. Actual top width of like belt sizes will also vary slightly depending on the manufacturer and belt style.

Showing Nominal Belt Top Widths, Outside Lengths and Angles with Our Corresponding Belt Numbers

IMPORTANT: Lengths shown (O.C. is Outside Circumference) are obtained by measuring around the outside of the belt. These lengths will not agree exactly with the size significant belt numbering system which is based on the effective length of the belt. Effective length ("engineered" length) cannot be measured in the field because special tools are required.

Automotive Top Widths are the standard sizes defined by the automotive belt industry (SAE J636). Due to manufacturing processes that create "Vertical Flats", the top width of XL and Truck/Bus series V-Belts will not agree with the printed top width dimensions. Top width on this page and on the belt sleeve refers to the pulley groove width and not the actual top width of these belts. A picture of a V-Belt with "Vertical Flats" is shown below. Actual top width of like belt sizes will also vary slightly depending on the manufacturer and belt style.

Showing Belt Numbers with Corresponding Nominal Outside Lengths, Top Widths and Angles

IMPORTANT: Lengths shown (O.C. is Outside Circumference) are obtained by measuring around the outside of the belt. These lengths will not agree exactly with the size significant belt numbering system which is based on the effective length of the belt. Effective length ("engineered" length) cannot be measured in the field because special tools are required.

Automotive Top Widths are the standard sizes defined by the automotive belt industry (SAE J636). Due to manufacturing processes that create "Vertical Flats", the top width of XL and Truck/Bus series V-Belts will not agree with the printed top width dimensions. Top width on this page and on the belt sleeve refers to the pulley groove width and not the actual top width of these belts. A picture of a V-Belt with "Vertical Flats" is shown below. Actual top width of like belt sizes will also vary slightly depending on the manufacturer and belt style.

Showing Nominal Belt Top Widths, Outside Lengths and Angles with Our Corresponding Belt Numbers

IMPORTANT: Lengths shown (O.C. is Outside Circumference) are obtained by measuring around the outside of the belt. These lengths will not agree exactly with the size significant belt numbering system which is based on the effective length of the belt. Effective length ("engineered" length) cannot be measured in the field because special tools are required.

Automotive Top Widths are the standard sizes defined by the automotive belt industry (SAE J636). Due to manufacturing processes that create "Vertical Flats", the top width of XL and Truck/Bus series V-Belts will not agree with the printed top width dimensions. Top width on this page and on the belt sleeve refers to the pulley groove width and not the actual top width of these belts. A picture of a V-Belt with "Vertical Flats" is shown below. Actual top width of like belt sizes will also vary slightly depending on the manufacturer and belt style.

Showing Hi-Power® II Belts with Corresponding Top Widths and Nominal Outside Lengths

PLEASE NOTE: V-Belt drives which use the belt as a clutch requires special consideration because the heat generated by belt slip (during engagement and disengagement) on some clutching applications can cause the V-Belt tensile materials in the belts listed below to shrink in length. The shrinkage may cause a belt, which is already engaged and driving, to not de-clutch, or a de-clutched belt may engage itself and start driving the machine unexpectedly. Depending on the machine and circumstances, either situation could prove dangerous to the machine operator or bystanders.

Belts especially designed to minimize or eliminate heat shrinkage may be required.

IMPORTANT: The outside length is determined by placing a steel tape around the outside of the belt. This method should be used because it is the one most commonly used by Dealers and Jobbers when measuring a belt.

Key to Size Numbering System

The part number is constructed by placing the number of strands required followed by a slash in front of the size.

In the example above 2/ is the number of strands, 3V600 is the belt size.

Size Lists

Showing Tri-Power® Belts with Corresponding Top Widths and Outside Lengths,

PLEASE NOTE: V-Belt drives which use the belt as a clutch requires special consideration because the heat generated by belt slip (during engagement and disengagement) on some clutching applications can cause the V-Belt tensile materials in the belts listed below to shrink in length. The shrinkage may cause a belt, which is already engaged and driving, to not de-clutch, or a de-clutched belt may engage itself and start driving the machine unexpectedly. Depending on the machine and circumstances, either situation could prove dangerous to the machine operator or bystanders.

Belts especially designed to minimize or eliminate heat shrinkage may be required.

IMPORTANT: The outside length is determined by placing a steel tape around the outside of the belt. This method should be used because it is the one most commonly used by Dealers and Jobbers when measuring a belt.
