PAUL SAYS

CALIBRATION OF TORQUE WRENCHES

Testing and recalibration of torque wrenches should be carried out on a regular basis to ensure accuracy. Ratchet mechanisms should be stripped, cleaned and lightly lubricated then reassembled. If any wear is apparent a repair kit should be used. (See catalogue entries for repair kits - if available). Under no circumstances use a torque wrench to undo fasteners. Always use a flexible handle. For further details on repair or service, contact Draper Tools on (023) 8049 4344 or +44 23 8049 4344 (from outside the U.K.)
